BASIS FOR DOUBLE PATENTING REJECTION

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

REJECTION OF CLAIMS OVER DOUBLE PATENTING

Claims 30, 41, 42, 45-47 and 53 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 8, 13, 17, 26, 29 and 30 of U.S. Patent No. 6,684,676. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to the skilled artisan to have combined the product (object) and tool (pressing body) in a combination construction. Clearly, this would have been obvious to the skilled artisan in light of the fact that the tool of claim 8 is directed to a specific use that limits its construction to being operable on an object that can be formed with an optical aperture. As to the claimed load controller, it is the examiner's position that such is an inherent provision of the device of claims 1, 8, 17 and 26 because the loader would be "controlled" to an extent that a loading force is applied to the object. Thus, a "load controller" would be an inherent feature of the loader and the pressing body that applies a loading force.

INDICATION OF ALLOWABLE SUBJECT MATTER

Claim 12 is allowed.

Claims 31-40, 43, 44 and 48-52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

PRIOR ART CITED BY EXAMINER

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

RESPONSE BY APPLICANT(S)

Applicant(s) response to be fully responsive and to provide for a clear record must specifically point out how the language of the claims patentably distinguishes them from the references, both those references applied in the objections and rejections and those references cited in view of the state of the art in accordance with 37 CFR 1.111 (a), (b) and (c).
